

DALFAD WIND FARM

Viewpoint 10
Ochiltree

Existing View: This view looks out from the south-western edge of the settlement, across a road to a rolling landscape of wooded farmland, backdropped by distant moorland hills. Buildings in Cumnock and nearby villages are visible amongst woodland and farmland to the east, and large clusters of operational and consented turbines are seen spread across the skylines to the east and south. Nearby houses and rising ground constrain views to the north and west.

Predicted Change: The proposed turbines would be seen along the road to the east above settlement at Cumnock and located at the transition between the settled farmland and open moorland beyond, extending the prominent group of consented turbines at Lethans. All three aviation lights would be seen at night above the lights of Cumnock and below the nearby streetlights. They would be seen in the context of aviation lights on other operational and consented turbines spread across the skyline.

Cumulative: The Drum, including its aviation lights at night, would appear behind the Proposed Development, and the two would appear as a single wind farm. Glen Water would be seen amongst the Lethans/Glenmucklock group and would generally be read as part of that, while further proposed turbines would be seen to extend the spread and density of operational and consented clusters across the view.

- 90° baseline panorama and cumulative wireline
- 53.5° photomontage
