

DALFAD WIND FARM

Viewpoint 3
Glenmuir valley

Existing View: This viewpoint is located on a local road in the bottom of the Glenmuir Water valley. The view to the north looks over the valley to low hills rising beyond, comprising pasture and commercial forestry, and forming a gently undulating skyline spanning the north-eastern outlook. Farm buildings at Whiteholm are partially visible to the north behind tree cover in the valley. Trees beside Glenmuir Water shorten views to the south-east where a large group of consented turbines is located, including aviation lights at night, and may be more openly visible in winter. Woodland and landform shorten views to the south-west where the house and farm buildings at Low Garleffan are visible at the top of the driveway.

Predicted Change: The proposed turbines would be visible across the valley to the north, the closest turbines would be in open view and appear as very large new features, with the northern end of the array a more peripheral feature extending into the distance and dropping behind the horizon. The substation and BESS facilities would be seen on the low skyline amongst some of the closer turbines. Two aviation lights would be visible across the dark valley to the north, seen in a different direction from lights on consented turbines at Lethans and Glenmuckloch.

Cumulative: The Drum wind farm would be seen behind the Proposed Development, appearing as a single wind farm. Glen Water turbines would appear above and between woodland to the southeast. Aviation lights on both of these would also be visible at night.

- 90° baseline panorama and cumulative wireline
- 53.5° photomontage
