

DALFAD WIND FARM

Viewpoint 7
Cairn Road

Existing View: This view is from a passing place on Cairn Road. There are fields on either side of the road and a small, wooded burn and some forestry in the foreground to the east. The view looking north and north-east is over settled farmlands towards sweeping moorland hills rising beyond with occasional blocks of forestry and distant operational and consented turbines on the skyline. Views to the east are shortened by the forestry, to the west by shelterbelts and to the north by rising ground, above which the consented Greenburn turbines will be seen prominently on the skyline.

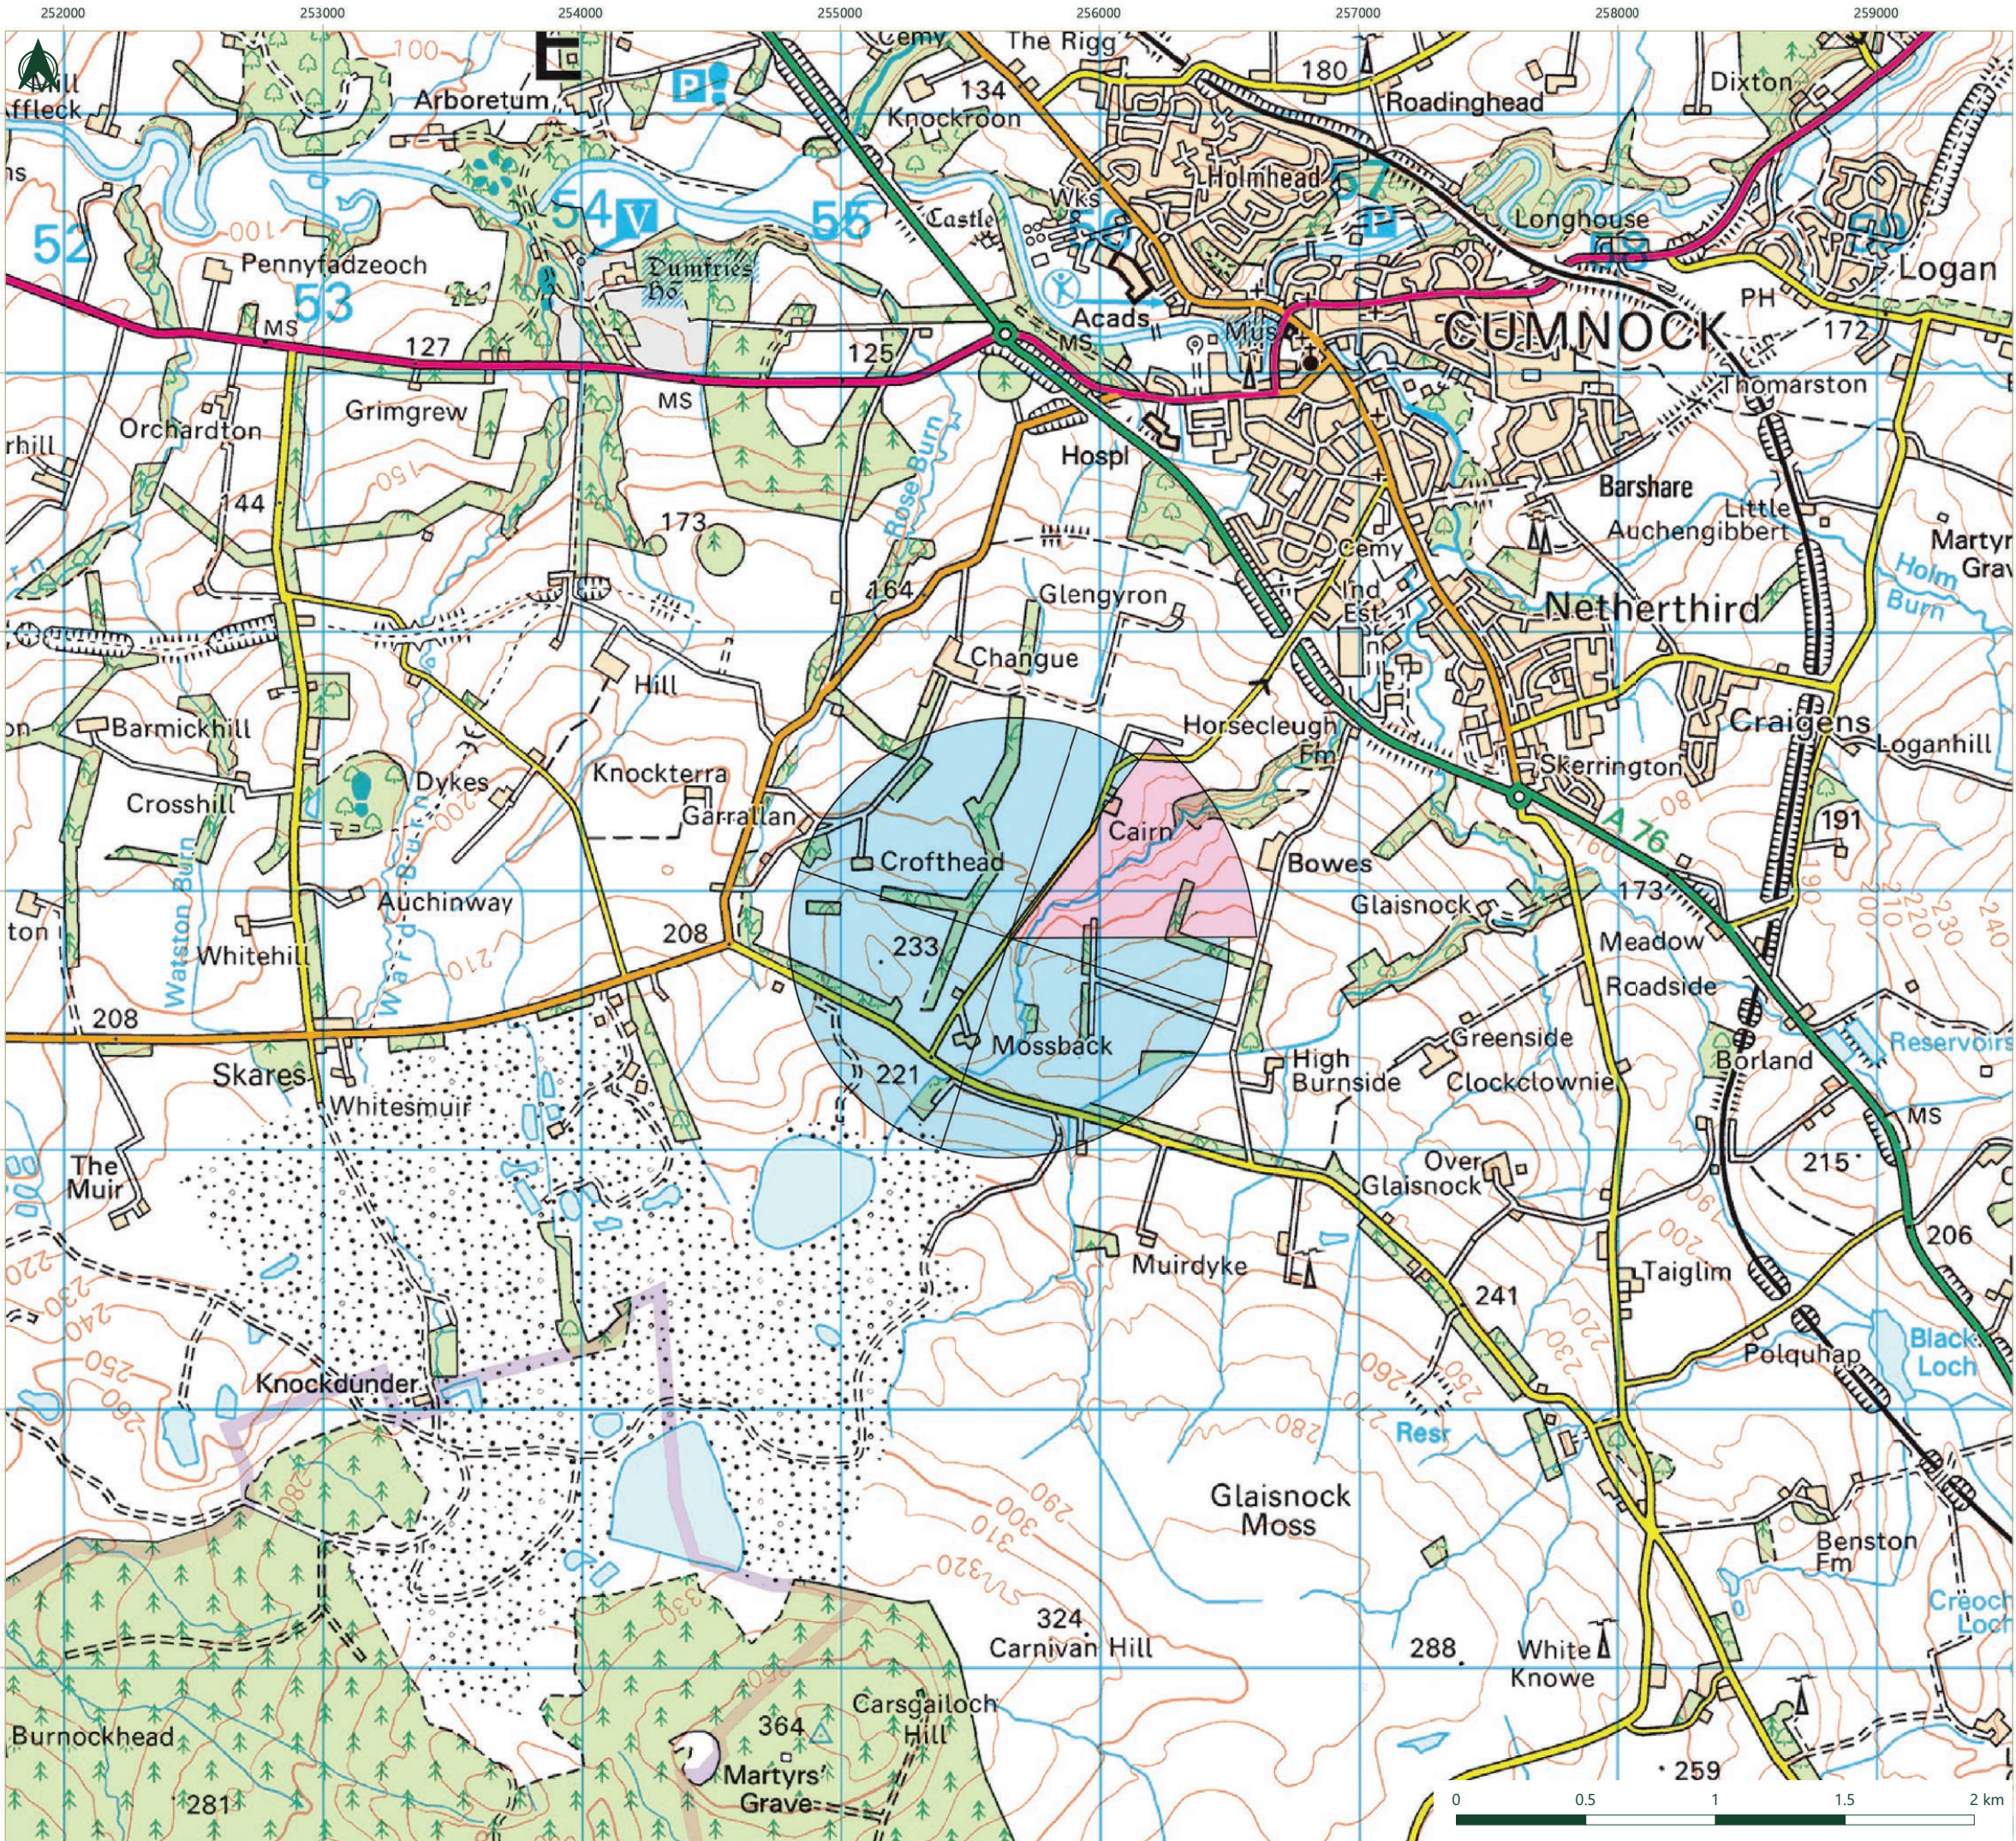

Predicted Change: The proposed turbines would be seen to the right of houses at Craigens set at the transition between the lower lying farmlands and moorland hills rising beyond. All three aviation lights would be visible at night on the skylike above settlement lights in the intervening landscape and in front of more distant aviation lights on operational and consented wind farms.

Cumulative: The Drum, including its aviation lights at night, would appear behind the Proposed Development, and the two would appear as a single wind farm. Glen Water turbines would be seen in open view on the skyline above the forestry to the east, including its aviation lights at night in front of a cluster of consented turbines.

- 90° baseline panorama and cumulative wireline
- 53.5° photomontage
