

DALFAD WIND FARM

Viewpoint 6
Craigens

Existing View: This viewpoint is in open green space to the rear of the houses on the eastern side of Craigens. Houses contain views to the north and west. Low hills extend right from behind the houses, gently rising round to the south to shorten the view, with trees along the skylike and throughout fields to the east and south. Longer views are available looking over rooftops to the west where the consented Greenburn turbines will be seen prominently on the skyline.

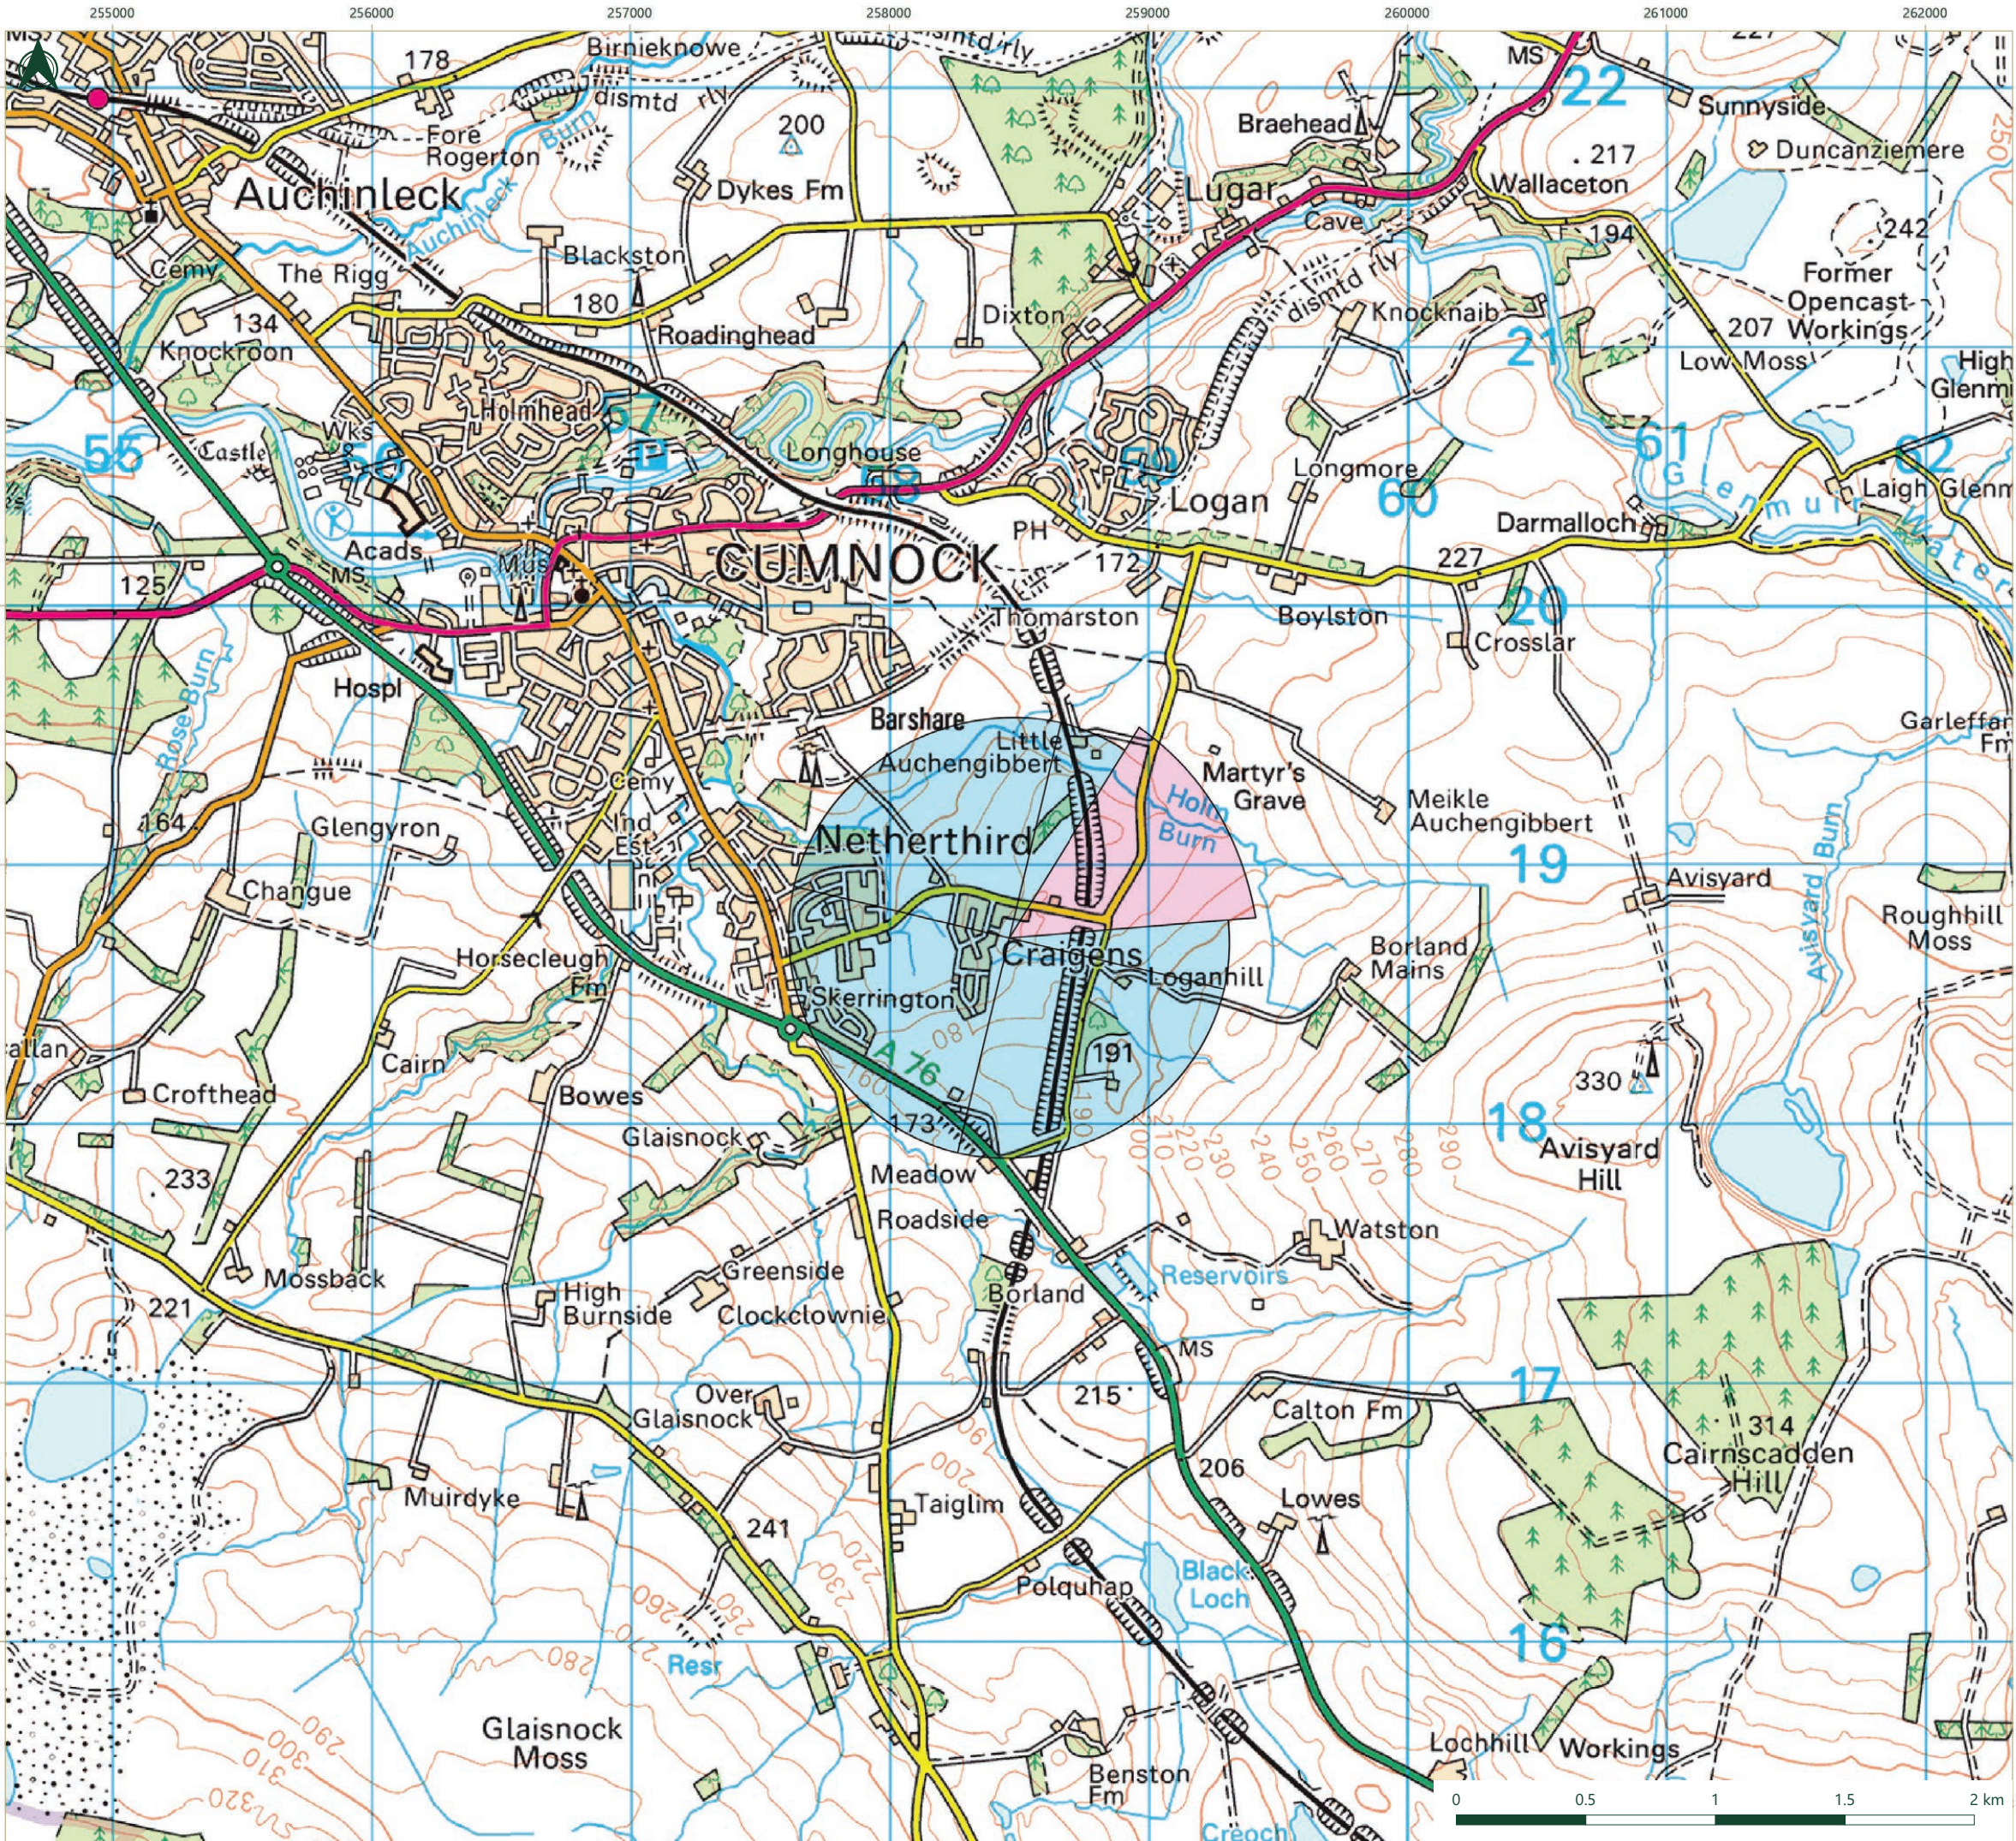

Predicted Change: The proposed turbines would be seen to the right of the houses to the north-east in groups of two, set behind the trees on the skyline. Some turbines would be screened by the nearby houses, with intervening landform screening most of the towers on more visible turbines and trees on the skyline further screening/filtering the rotors of some. The aviation lights would on turbines 5 and 12 would be visible on the skyline beyond lights on houses in the village, the light on turbine 10 would sit just above the skyline and would be seen filtered through trees.

Cumulative: The Drum, including its aviation lights at night, would be visible behind the Proposed Development, and the two would appear as a single wind farm. One or two blade tips of Glen Water turbines would be seen to the east.

- 90° baseline panorama and cumulative wireline
- 53.5° photomontage
