

DALFAD WIND FARM

Viewpoint 1
A70

Existing View: This view is located at a layby on the A70, north-west of the Site. Views to the east and south are short, looking uphill into rolling pasture with a few small trees and power lines on wooden poles. The view to the west, north and north-east is more open and looks over the Bellow Water valley and Airds Moss, with low hills overlapping into the distance. Operational and consented turbines are and will be seen looking along the valley in either direction and at closer proximity looking across the valley to the north, some of which include visible aviation lights at night.

Predicted Change: The proposed turbines would be seen at relatively close proximity along the nearby skyline to the east and south-east and would be the closest and most prominent turbines seen from here. At night, two aviation lights would be seen above the dark skyline, away from floodlighting at the nearby haulage yard (seen along the road to the north-east) and aviation lights on operational and consented turbines.

Cumulative: The Drum would be visible behind the Proposed Development, together it and the Proposed Development would appear as a single wind farm, including additional aviation lights at night. Other proposed wind farms would also be visible, adding to operational and consented clusters to the southwest and northeast.

- 90° baseline panorama and cumulative wireline
- 53.5° photomontage
